

Synccovery V7

Server Side Settings Import

- Add the following line to the [Main] section of C:\ProgramData\Synccovery\Synccovery.ini:
ServerSideConfigFileName=synconfig.xml
- Xml file must be saved containing „All Settings“
- Imported paths for “folders for deleted files” and “older version folders” are automatically converted in terms of / or \ for Mac or Windows

Folders for deleted files now have additional relative path options

Examples for valid paths on local and network drives:

C:\Archive
\\Computername\C\Archive
.\Archive (archive folder in profile's base folder)
..\Archive (archive folder one level higher)
Archive (archive folder is created in every subfolder where a file has to be deleted)

Examples for valid paths when using an Internet Protocol:

/Archive (archive folder in root folder)
./Archive (archive folder in profile's base folder)
../Archive (archive folder one level higher)
Archive (archive folder is created in every subfolder where a file has to be deleted)
